FieldTurf[®]

A Tarkett Sports Company

THE ULTIMATE
SURFACE EXPERIENCE

FieldTurf brings to you next-generation artificial grass, made specifically for Cricket.

Unlike regular sports, a cricket field requires specialized turf for different areas in the field. Keeping this in mind, we offer excellent solutions for:

- ◆ Cricket pitch area (with variations for fast bowling and spin bowling)
- ◆ Bowling run-up and Fielding area

These highly proven sports surfaces are ideal for practice facilities where cricketers train over many years as they prevent repetitive-stress injuries that are otherwise caused due to hard and unforgiving ground conditions.

For Cricket Pitches

There are two broad categories you can choose your cricket pitch from.

Short Pile: 9mm pile height conventional pitches, exclusively developed for Cricket Practice, offering an ideal surface for an excellent ball bounce, pace and support for spinning.

Long Pile: 35mm pile height turf, which allows enhanced fast or spin bowling conditions to be created, based on the direction of the installation, thus providing advanced training conditions.

For Bowling & Run-Up Areas

We offer 2-3 varieties of turf for bowling run-up & fielding areas which can be installed either indoors or outdoors; on a hard surface (cement / tile etc) or on normal ground (after sub-base preparation).

Also, unlike most artificial grass systems, even metal spikes can be used on the monofilament. Players can now confidently dive, slide or practice any fielding technique without any fear of injuries.
